TechNest

(Fictional furniture company)

- TechNest's mission is to bridge the gap between the past and the future, offering furniture that embodies the comfort of tradition while embracing the possibilities of technology.

About Us

- At TechNest, our journey began with a simple yet profound realization: the way we furnish our homes can greatly influence our quality of life. Founded by twin siblings Luke and Leia Voss in Scranton, Pennsylvania, we have been dedicated since 1997 to bringing comfort and innovation together. Our meticulously crafted furniture pieces, ranging from our self-cleaning tables to bedframes with integrated projectors, aim to create environments that inspire relaxation, creativity, and connection. As a proud local business, we take our responsibility to the community seriously, striving to serve our neighbors with furniture that is both stylish and functional. We believe that comfort should never be compromised by style, and that innovation should be accessible in every room. Our friendly team is here to help, offering personalized service and high-quality maintenance to ensure you receive the best value. Whether you're looking to lavish your home or upgrade your workplace, we are excited to be your trusted partner in sophistication, committed to enhancing lives through thoughtful design and community involvement.

Rules

1. **Business Hours** - TechNest is open Sunday through Friday from 9 AM to 8 PM and closed on Saturdays. Scheduled order pickups are available from 6 AM to 8 PM on operating days.
2. **Confidentiality & Data Protection** - Customer and company information must be handled securely and not shared outside authorized personnel.
3. **Copyright & Intellectual Property** - All product designs, images, and promotional materials, including but not limited to logos, photographs, and descriptions, are the exclusive property of the store and are protected by copyright law. Unauthorized reproduction, distribution, or use of these materials without express written consent is prohibited.
4. **Pricing & Promotions** - Discounts and promotions apply only during advertising and cannot be combined with other offers unless stated otherwise (Black Friday, Labor Day, Lazy Day - August 10).
5. **Staff Training** - Staff must attend seminars and training sessions to remain up-to-date on policies and product knowledge. The training must be passed and approved by a trainer.
6. **Uniform Policy** - Business casual attire is required for all employees.
7. **Breaks and Lunches** - Staff are entitled to two 15-minute breaks and one 45-minute lunch per eight-and-a-half-hour shift.
8. **Attendance Policy** - Infractions carry the following points: tardiness (1–2), unexcused absences (5), no-call/no-shows (6), and dress code violations (2). Active point totals determine disciplinary action: verbal warning at 6 points, written warning at 9, suspension at 12, and termination at 15 or more. Each infraction's points expire one year after its date.
9. **Promotion Eligibility** - Employees must work a minimum of one year before becoming eligible for a higher position.
10. **Vacation Time Eligibility** - Employees must work at least 6 months before being eligible for paid time off.

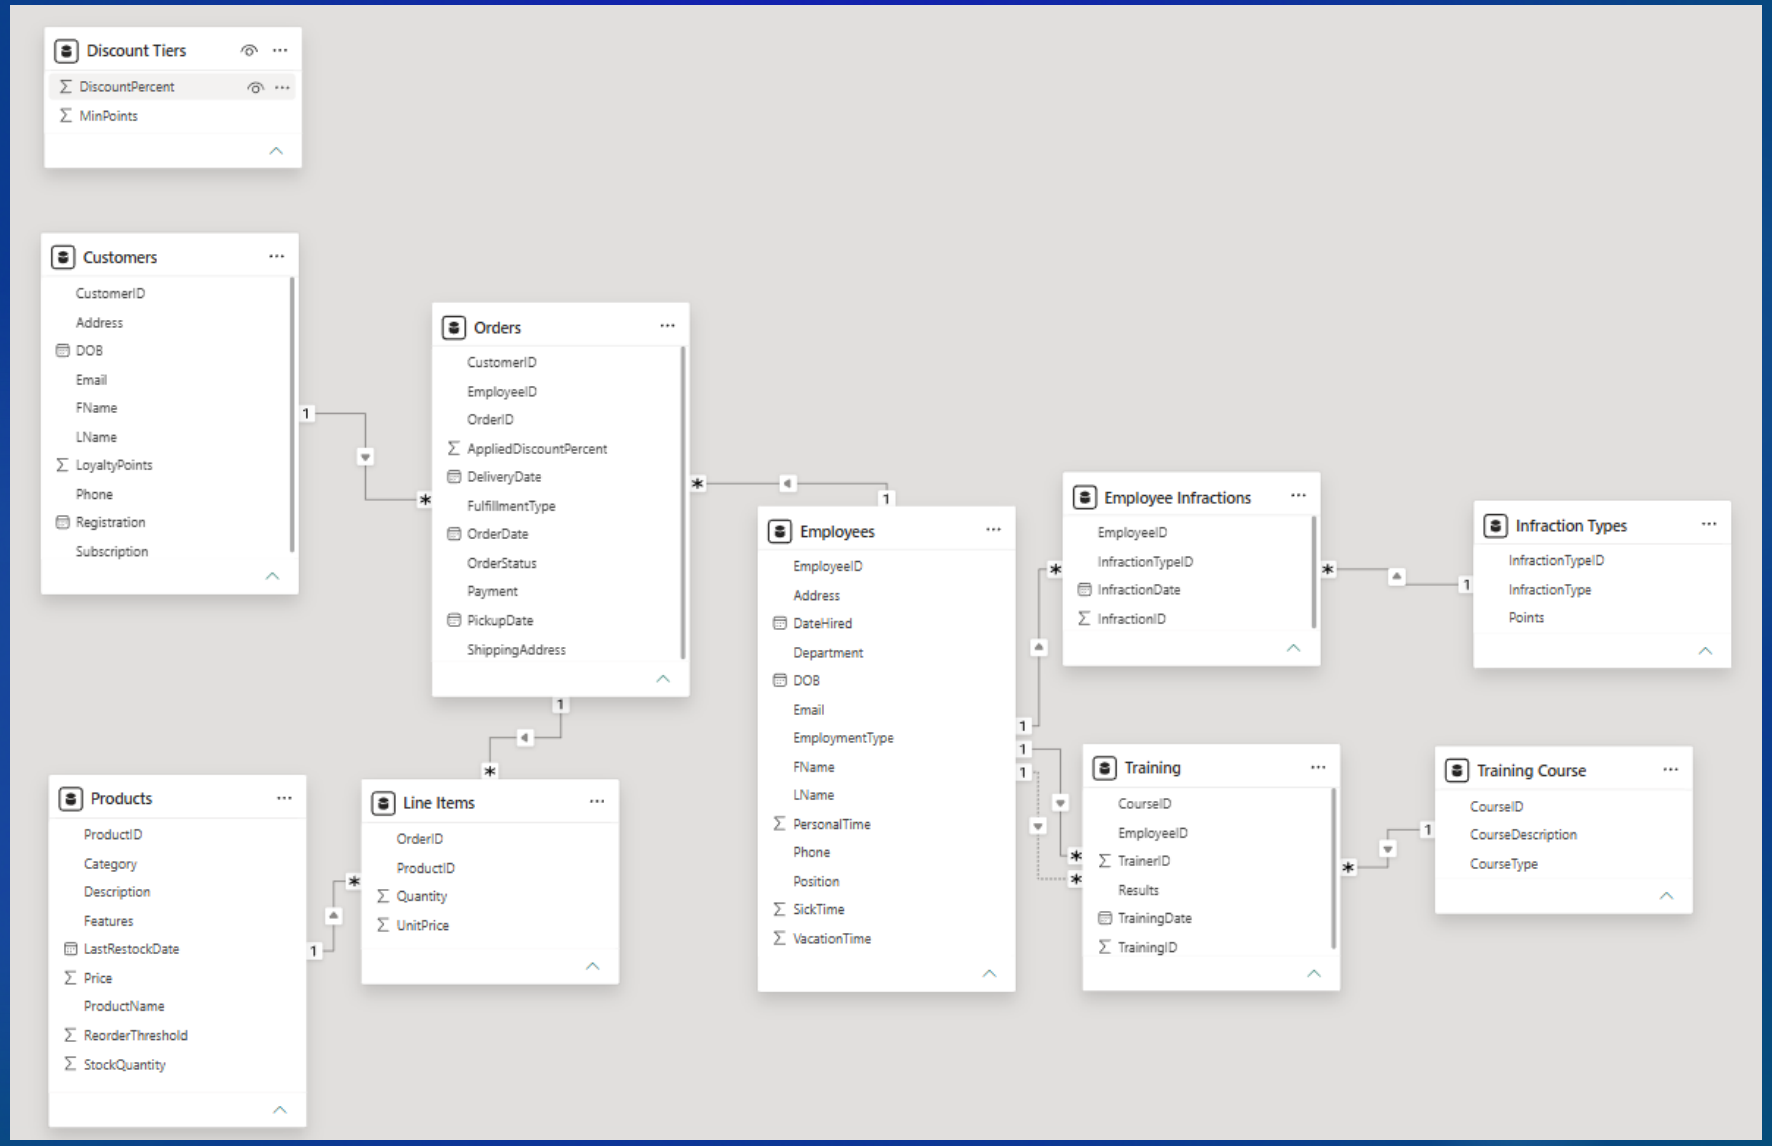

Rules

11. **Workplace Safety** – Employees must use approved lifting equipment or request assistance when moving heavy furniture and keep aisles and emergency exits clear.
12. **Total Time Off Limitations** - Total time off cannot exceed 30 days, sick days are limited to 9, vacation time is limited to 14, and personal time is limited to 7.
13. **Commission Bonus** - The employee with the highest sales total after discounts for the current calendar year receives a one-time $1,000 bonus. If multiple employees tie for the highest total, each receives the bonus.
14. **Single Job Title** - Employees can only belong to one department and cannot have multiple job titles.
15. **Minors' Employment** - Minors (under 18) are permitted to work part-time hours only, per labor regulations.
16. **Employee Orders** - Employees may not process their orders if they buy something under their name to prevent misuse of privileges.
17. **Unique Emails/Phone Numbers** - Both employee and customer email and phone numbers must be unique and cannot match existing accounts.
18. **Loyalty Point Limitation** - Customers' loyalty points are capped at 3,000. A reminder to use points will be sent once a customer reaches the 2,000-point threshold.
19. **Shipping Policy** - Customers may choose USPS shipping or in-store pickup. Shipping costs are based on USPS rates. In-store pickup is free.
20. **Return Policy** - Returns of new and unopened products are allowed within 365 days for a full refund. Open products can be returned within 180 days.

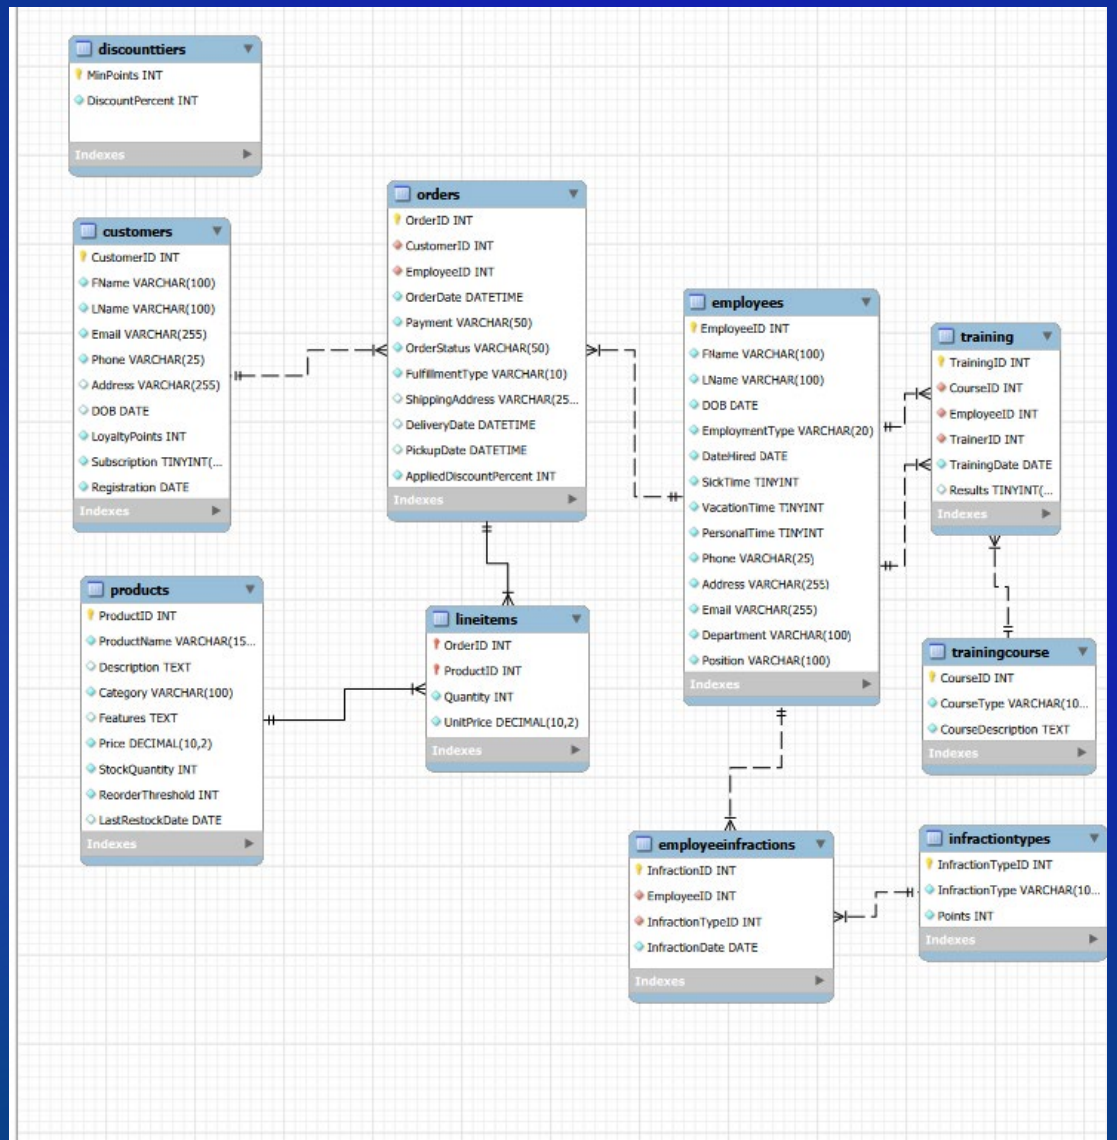

Rules

21. **Payment Limit** - Each customer order will be limited to a single payment method; multiple cards will not be accepted for an order.
22. **Restock** - Products are expected to be at their restock threshold at the end of every month. Weekly checks will be done to ensure products are up to code.
23. **Product Demonstrations** - Customers may request an in-store demonstration of smart furniture before purchasing. Staff must explain key features, setup requirements, and device compatibility.
24. **Membership** - Each customer must be a member at TechNest to make a purchase. If you are not a member, you can sign up for one at checkout with your order.
25. **Loyalty Discounts** - Customers receive the highest discount their loyalty points qualify for: 100 points (5%), 500 (10%), 1,000 (15%), 2,000 (20%), 2,500 (25%), and 3,000 (30%). Customers below 100 points receive no discount. Discounts cannot be combined with other offers unless stated otherwise.

Data Model (Power BI)

Entity Relationship Diagram (ERD) (Workbench)

Created Tables

Examples of the created tables, showcasing the Orders table.

```sql
CREATE TABLE Orders (
    OrderID INT AUTO_INCREMENT PRIMARY KEY,
    CustomerID INT NOT NULL,
    EmployeeID INT NOT NULL,
    OrderDate DATETIME NOT NULL,
    Payment VARCHAR(50) NOT NULL,
    OrderStatus VARCHAR(50) NOT NULL,
    FulfillmentType VARCHAR(10) NOT NULL,
    ShippingAddress VARCHAR(255),
    DeliveryDate DATETIME,
    PickupDate DATETIME,
    AppliedDiscountPercent INT NOT NULL DEFAULT 0,

    FOREIGN KEY (CustomerID)
        REFERENCES Customers(CustomerID),

    FOREIGN KEY (EmployeeID)
        REFERENCES Employees(EmployeeID),

    CHECK (FulfillmentType IN ('Ship', 'Pickup')),
    CHECK (AppliedDiscountPercent BETWEEN 0 AND 100),
    CHECK (
        (FulfillmentType = 'Ship'
            AND ShippingAddress IS NOT NULL
            AND PickupDate IS NULL)
        OR
        (FulfillmentType = 'Pickup'
            AND ShippingAddress IS NULL
            AND DeliveryDate IS NULL)
    ),

    CHECK (
        DeliveryDate IS NULL
        OR DeliveryDate >= OrderDate
    ),

    CHECK (
        PickupDate IS NULL
        OR PickupDate >= OrderDate
    )
) ENGINE = InnoDB;
```

Created Tables

Examples of the created tables, showcasing the Customers and Employees tables.

```sql
CREATE TABLE Customers (
    CustomerID INT AUTO_INCREMENT PRIMARY KEY,
    FName VARCHAR(100) NOT NULL,
    LName VARCHAR(100) NOT NULL,
    Email VARCHAR(255) NOT NULL UNIQUE,
    Phone VARCHAR(25) NOT NULL UNIQUE,
    Address VARCHAR(255),
    DOB DATE,
    LoyaltyPoints INT NOT NULL DEFAULT 0,
    Subscription TINYINT(1) NOT NULL DEFAULT 1,
    Registration DATE NOT NULL,

    CHECK (LoyaltyPoints BETWEEN 0 AND 3000),
    CHECK (Subscription IN (0, 1))
) ENGINE = InnoDB;
```

```sql
CREATE TABLE Employees (
    EmployeeID INT AUTO_INCREMENT PRIMARY KEY,
    FName VARCHAR(100) NOT NULL,
    LName VARCHAR(100) NOT NULL,
    DOB DATE NOT NULL,
    EmploymentType VARCHAR(20) NOT NULL,
    DateHired DATE NOT NULL,
    SickTime TINYINT NOT NULL DEFAULT 0,
    VacationTime TINYINT NOT NULL DEFAULT 0,
    PersonalTime TINYINT NOT NULL DEFAULT 0,
    Phone VARCHAR(25) NOT NULL UNIQUE,
    Address VARCHAR(255) NOT NULL,
    Email VARCHAR(255) NOT NULL UNIQUE,
    Department VARCHAR(100) NOT NULL,
    Position VARCHAR(100) NOT NULL,

    CHECK (EmploymentType IN ('Full-Time', 'Part-Time')),
    CHECK (SickTime BETWEEN 0 AND 9),
    CHECK (VacationTime BETWEEN 0 AND 14),
    CHECK (PersonalTime BETWEEN 0 AND 7),
    CHECK (DateHired >= DOB)
) ENGINE = InnoDB;
```

Data Generation Overview

- Generated sample data in Python (Jupyter Notebook)
- Inserted directly into MySQL using mysql-connector-python
- Faker for realistic names and addresses; fixed seeds for repeatable results
- Designed to satisfy all CHECK and foreign key constraints, with deliberate rule violations to test the queries

312 rows · 10 tables

TableName	RowCount
Customers	30
Discount Tiers	7
Employees	25
Infraction Types	5
Employee Infractions	15
Products	25
Orders	50
Line Items	102
Training Courses	3
Employee Training	50

Python (Jupyter)

mysql-connector-python

MySQL (TechNest)

Power BI

Connecting and Inserting Generation

Connect to MySQL

```
import mysql.connector
from getpass import getpass

conn = mysql.connector.connect(
    host="localhost",
    user="root",
    password=getpass("MySQL password: "),
    database="technest"
)

cursor = conn.cursor()
```

```
MySQL password:  ••••••••
```

Password protection: getpass() hides password entry and keeps the password out of the saved code.

Example of an Insert with SQL

```
sql = """
INSERT INTO discounttiers (MinPoints, DiscountPercent)
VALUES (%s, %s)
"""

rows = [(0, 0), (100, 5), (500, 10)]

cursor.executemany(sql, rows)
conn.commit()
```

Parameterized SQL: %s placeholders pass values separately, avoiding quoting errors and protecting against SQL injection through those values.

Rule-Aware Data Generation

Fulfillment Logic: Shipping vs. Pickup

```
shipping_address = None
delivery_date = None
pickup_date = None

if fulfillment_type == "Ship":
    shipping_address = customer_address

    if days_ago > 7:
        order_status = "Delivered"
        delivery_date = order_date + timedelta(
            days=random.randint(3, 7)
        )
    else:
        order_status = "Shipped"

else:
    if days_ago > 3:
        order_status = "Picked Up"
        pickup_date = order_date + timedelta(
            hours=random.randint(3, 48)
        )
    else:
        order_status = "Ready for Pickup"
```

Order Linking Logic: Orders and Line Items

```
    cursor.execute(order_sql, (
        customer_id,
        employee_id,
        order_date,
        payment,
        order_status,
        fulfillment_type,
        shipping_address,
        delivery_date,
        pickup_date,
        discount
    ))

    order_id = cursor.lastrowid
    orders_added += 1

cursor.execute(lineitem_sql, (
    order_id,
    product_id,
    quantity,
    price
))

lineitems_added += 1
```

Discount Logic: Loyalty Points and Tiers

```
# Find the discount for the highest qualifying tier.
def get_discount(points):
    discount = 0

    for minimum_points, percent in tiers:
        if points >= minimum_points:
            discount = percent

    return discount

discount = get_discount(loyalty_points)
```

Business Rule Test Cases

Deliberate test cases provide known results for checking the business-rule queries.

Rule	Sample test case	Expected query result
10. Time Off Eligibility	Employee 23 has 2 sick days after about 60 days employed.	Flag Employee 23 for having PTO before completing six months.
18. Loyalty Points Notification	Customers 28, 29, and 30 have 2,200, 2,800, and 3,000 points.	Return all three customers for notification.
20. Return Eligibility	Orders span the last two years.	Identify orders within 180 days for opened/unopened returns, and 181–365 days for unopened returns only. Actual eligibility also depends on product condition.
22. Restock Threshold	Products 1–4 have stock below their reorder thresholds.	Return all four products for restocking.
24. Membership Counts	Customer 1 is unsubscribed; the other 29 are subscribed.	Show 29 members and 1 nonmember.

Simple Queries

1. Time Off Eligibility

- This query will show employees who have sick, vacation, or personal time before completing six months of employment.
- TechNest will use this information to identify and correct PTO balances assigned before employees become eligible, as required by Rule 10.

Query:

```
SELECT
    EmployeeID,
    FName AS `First Name`,
    LName AS `Last Name`,
    DateHired,
    SickTime,
    VacationTime,
    PersonalTime,
    DATE_ADD(DateHired, INTERVAL 6 MONTH) AS PTOEligibleFrom
FROM employees
WHERE CURDATE() < DATE_ADD(DateHired, INTERVAL 6 MONTH)
  AND (
      SickTime > 0
      OR VacationTime > 0
      OR PersonalTime > 0
  );
```

Result:

	EmployeeID	First Name	Last Name	DateHired	SickTime	VacationTime	PersonalTime	PTOEligibleFrom
▶	23	Riley	Bennett	2026-08-24	2	0	0	2027-02-24

Simple Queries

2. Loyalty Points Notification

- This query will show customers with at least 2,000 loyalty points, including their names, point balances, and email addresses.
- TechNest will use this information to contact customers and remind them to redeem their points as they approach or reach the 3,000-point cap, as required by Rule 18.

Query:

```
SELECT
    CustomerID,
    FName AS `First Name`,
    LName AS `Last Name`,
    LoyaltyPoints,
    Email AS `Contact Email`
FROM customers
WHERE LoyaltyPoints >= 2000
ORDER BY LoyaltyPoints DESC;
```

Result:

CustomerID	First Name	Last Name	LoyaltyPoints	Contact Email
30	Taylor	Reed	3000	taylor.reed.test@example.com
29	Jordan	Lee	2800	jordan.lee.test@example.com
28	Alex	Morgan	2200	alex.morgan.test@example.com

Simple Queries

3. Return Eligibility

- This query will show orders within the return window and classify them as eligible by date for opened or unopened returns within 180 days, or unopened returns only within 365 days.
- TechNest will use this information to check purchase dates when processing returns under Rule 20, then confirm the product's condition before approving a refund.

Query:

```sql
SELECT
    OrderID,
    CustomerID,
    OrderDate,
    DATEDIFF(CURDATE(), OrderDate) AS DaysSinceOrder,
    CASE
        WHEN DATE(OrderDate) >= DATE_SUB(CURDATE(), INTERVAL 180 DAY)
            THEN 'Opened or Unopened'
        ELSE 'Unopened Only'
    END AS ReturnEligibility
FROM orders
WHERE OrderDate >= DATE_SUB(CURDATE(), INTERVAL 365 DAY)
  AND OrderDate <= NOW()
ORDER BY OrderDate DESC;
```

Results:

OrderID	CustomerID	OrderDate	DaysSinceOrder	ReturnEligibility
4	30	2026-10-22 10:04:00	4	Opened or Unopened
7	8	2026-10-19 16:14:00	7	Opened or Unopened
3	28	2026-10-12 19:27:00	14	Opened or Unopened
5	13	2026-10-07 09:19:00	19	Opened or Unopened
2	21	2026-10-04 13:18:00	22	Opened or Unopened
6	7	2026-10-04 12:55:00	22	Opened or Unopened
8	10	2026-09-29 15:21:00	27	Opened or Unopened
13	20	2026-09-27 15:50:00	29	Opened or Unopened
9	10	2026-09-20 11:37:00	36	Opened or Unopened
11	5	2026-09-13 19:54:00	43	Opened or Unopened
14	4	2026-08-24 11:42:00	63	Opened or Unopened
12	15	2026-08-14 11:12:00	73	Opened or Unopened

36	27	2025-11-11 16:28:00	349	Unopened Only
35	2	2025-10-28 13:35:00	363	Unopened Only

Simple Queries

4. Restock Threshold

- This query will show products whose stock quantities are below their reorder thresholds, including the number of units needed to reach each threshold.
- TechNest will use this information during weekly inventory checks to prioritize replenishment and meet the stock requirements in Rule 22.

Query:

```
SELECT
    ProductID,
    ProductName,
    StockQuantity,
    ReorderThreshold,
    ReorderThreshold - StockQuantity AS UnitsNeeded
FROM products
WHERE StockQuantity < ReorderThreshold
ORDER BY UnitsNeeded DESC, ProductID;
```

Result:

ProductID	ProductName	StockQuantity	ReorderThreshold	UnitsNeeded
4	Massage Gaming Chair	0	15	15
2	Heated Ergonomic Chair	3	13	10
3	Posture-Tracking Office Chair	17	19	2
1	Smart Office Chair with Speakers	15	16	1

Simple Queries

5. Membership Counts

- This query will show how many customers are subscribed members and how many are nonmembers.
- TechNest will use this information to identify membership enrollment needs and monitor its customer base in support of Rule 24, which requires membership to make a purchase.

Query:

```
SELECT
    CASE
        WHEN Subscription = 1 THEN 'Member'
        WHEN Subscription = 0 THEN 'Nonmember'
        ELSE 'Unknown'
    END AS MembershipStatus,
    COUNT(*) AS CustomerCount
FROM customers
GROUP BY Subscription
ORDER BY Subscription DESC;
```

Result:

MembershipStatus	CustomerCount
Member	29
Nonmember	1

Business Rule Test Cases

Rule	Sample test case	Expected query result
5. Training Results	Fifty training records, including two failures.	Show employees, courses, trainers, and results; identify Employees 1 and 2's failed Basic Enrollment records.
6. & 8. Employee Infraction Details	Fifteen infractions linked to employees and infraction types.	Show employee names, infraction descriptions, points, dates, and expiration status.
13. Highest-Selling Employee	Current-calendar-year orders and line items.	Identify the employee with the highest sales total for the $1,000 bonus.
22. Product Sales Performance	Current-year orders, products, and line items.	Show units sold and sales value per product using saved line-item prices.
24. Nonmember Purchase Check	Unsubscribed Customer 1 has no orders.	Return zero orders placed by nonmembers.

Complex Queries

1. Training Results

- This query will show each employee's training courses, assigned trainer, training dates, and pass or fail results.
- TechNest will use this information to identify employees who need additional training and arrange retakes for failed courses, supporting Rule 5.

Query:

```
SELECT
    tr.EmployeeID,
    CONCAT(e.FName, ' ', e.LName) AS EmployeeName,
    tc.CourseType AS TrainingCourse,
    CONCAT(t.FName, ' ', t.LName) AS TrainerName,
    tr.TrainingDate,
    CASE
        WHEN tr.Results = 1 THEN 'Pass'
        WHEN tr.Results = 0 THEN 'Fail'
        ELSE 'Not Recorded'
    END AS TrainingResult
FROM training AS tr
JOIN employees AS e
    ON tr.EmployeeID = e.EmployeeID
JOIN trainingcourse AS tc
    ON tr.CourseID = tc.CourseID
JOIN employees AS t
    ON tr.TrainerID = t.EmployeeID
ORDER BY tr.Results, tr.EmployeeID, tr.CourseID;
```

Results:

EmployeeID	EmployeeName	TrainingCourse	TrainerName	TrainingDate	TrainingResult

Complex Queries

2. Employee Infraction Details

- This query will show employee names, infraction descriptions, assigned points, infraction dates, and whether each infraction's points are active or expired.
- TechNest will use this information to review attendance and dress code violations and exclude expired points from disciplinary decisions under Rules 6 and 8.

Query:

```
SELECT
    e.EmployeeID,
    CONCAT(e.FName, ' ', e.LName) AS EmployeeName,
    it.InfractionType,
    it.Points,
    ei.InfractionDate,
    DATE_ADD(ei.InfractionDate, INTERVAL 1 YEAR) AS ExpirationDate,
    CASE
        WHEN CURDATE() >= DATE_ADD(ei.InfractionDate, INTERVAL 1 YEAR)
            THEN 'Expired'
        ELSE 'Active'
    END AS PointStatus
FROM employeeinfractions AS ei
JOIN employees AS e
    ON ei.EmployeeID = e.EmployeeID
JOIN infractiontypes AS it
    ON ei.InfractionTypeID = it.InfractionTypeID
ORDER BY e.EmployeeID, ei.InfractionDate DESC;
```

Result:

EmployeeID	EmployeeName	InfractionType	Points	InfractionDate	ExpirationDate	PointStatus
1	Jennifer Harris	Unexcused Absence	5	2025-09-18	2026-09-18	Expired

Complex Queries

3. Highest-Selling Employee

- This query will show the employee with the highest sales total for the current calendar year, using recorded product prices and applied discounts.
- TechNest will use this information to identify the employee eligible for the $1,000 bonus under Rule 13.

Query:

```sql
WITH EmployeeSales AS (
    SELECT
        e.EmployeeID,
        CONCAT(e.FName, ' ', e.LName) AS EmployeeName,
        COUNT(DISTINCT o.OrderID) AS TotalOrders,
        ROUND(
            SUM(
                li.Quantity * li.UnitPrice
                * (1 - o.AppliedDiscountPercent / 100.0)
            ),
            2
        ) AS TotalSales
    FROM employees AS e
    JOIN orders AS o
        ON e.EmployeeID = o.EmployeeID
    JOIN lineitems AS li
        ON o.OrderID = li.OrderID
    WHERE YEAR(o.OrderDate) = YEAR(CURDATE())
      AND o.OrderDate <= NOW()
    GROUP BY e.EmployeeID, e.FName, e.LName
),
RankedSales AS (
    SELECT
        EmployeeID,
        EmployeeName,
        TotalOrders,
        TotalSales,
        RANK() OVER (ORDER BY TotalSales DESC) AS SalesRank
    FROM EmployeeSales
)
SELECT
    EmployeeID,
    EmployeeName,
    TotalOrders,
    TotalSales,
    1000.00 AS BonusAmount
FROM RankedSales
WHERE SalesRank = 1
ORDER BY EmployeeID;
```

Result:

EmployeeID	EmployeeName	TotalOrders	TotalSales	BonusAmount
2	Kellie Walsh	6	19458.28	1000

Complex Queries

4. Product Sales Performance

- This query will show each product's units sold and total sales after discounts for the current calendar year, using the prices saved in its line items.
- TechNest will use this information to prioritize replenishment of popular products and review slower-selling items, supporting Rule 22's restocking requirements.

Query:

```
SELECT
    p.ProductID,
    p.ProductName,
    SUM(li.Quantity) AS UnitsSold,
    ROUND(
        SUM(
            li.Quantity * li.UnitPrice
            * (1 - o.AppliedDiscountPercent / 100.0)
        ),
        2
    ) AS TotalSales
FROM products AS p
JOIN lineitems AS li
    ON p.ProductID = li.ProductID
JOIN orders AS o
    ON li.OrderID = o.OrderID
WHERE YEAR(o.OrderDate) = YEAR(CURDATE())
GROUP BY p.ProductID, p.ProductName
ORDER BY TotalSales DESC, p.ProductID;
```

Result:

ProductID	ProductName	UnitsSold	TotalSales
1	Smart Office Chair with Speakers	8	2537.43
2	Heated Ergonomic Chair	2	730.98
3	Posture-Tracking Office Chair	2	849.98
4	Massage Gaming Chair	7	3689.94
6	Self-Cleaning Table	4	2879.96
7	Holo-Projector Coffee Table	5	6974.95
8	Wireless Charging Side Table	3	549.97
9	Temperature-Controlled Dining Table	6	5879.95
10	Touchscreen Coffee Table	4	3099.97
11	Voice-Controlled Standing Desk	14	8889.87
12	Wireless Charging Workstation	3	1567.47
13	Smart Corner Desk	9	5524.92
14	Adjustable Gaming Desk	4	1619.96
15	Compact Motorized Desk	7	2379.94
16	AI-Powered Bed	4	8499.97
17	Sleep-Tracking Adjustable Bed	1	1614.99
18	Temperature-Controlled Bed	8	15179.93
19	Smart Storage Bed	7	9519.94
20	Voice-Controlled Reclining Bed	4	7199.96
21	App-Controlled LED Bookshelf	7	1799.94
22	Fingerprint-Lock Filing Cabinet	14	4919.88
24	Motion-Sensor Storage Cabinet	11	3482.40
25	Climate-Controlled Display Cabinet	5	3554.96

Complex Queries

5. Nonmember Purchase Check

- This query will show orders linked to customers whose membership is currently inactive, including the customer's name, order ID, and purchase date.
- TechNest will use this information to investigate possible nonmember purchases and check compliance with Rule 24, which requires membership to make a purchase.

Query:

```
SELECT
    o.OrderID,
    o.OrderDate,
    c.CustomerID,
    CONCAT(c.FName, ' ', c.LName) AS CustomerName,
    c.Subscription,
    o.Payment,
    o.OrderStatus
FROM orders AS o
JOIN customers AS c
    ON o.CustomerID = c.CustomerID
WHERE c.Subscription = 0
ORDER BY o.OrderDate DESC;
```

Result:

	OrderID	OrderDate	CustomerID	CustomerName	Subscription	Payment	OrderStatus

(Zero rows is the expected result because unsubscribed Customer 1 has no orders.)

Customer Invoice

Order Info

- This query will show an invoice for one customer's selected order, including fulfillment details, payment method, purchased products, saved prices, applied discount, and final total.
- TechNest will use this information to provide customers with an itemized purchase record and verify fulfillment, payment, and loyalty discounts under Rules 21, and 25.

Queries:

```
SET @customer_id = (
    SELECT CustomerID
    FROM orders
    GROUP BY CustomerID
    HAVING COUNT(*) >= 2
    ORDER BY CustomerID
    LIMIT 1
);

SET @order_id = (
    SELECT OrderID
    FROM orders
    WHERE CustomerID = @customer_id
    ORDER BY OrderDate DESC, OrderID DESC
    LIMIT 1
);
SET @order_id = (
    SELECT OrderID
    FROM orders
    WHERE CustomerID = @customer_id
    ORDER BY OrderDate DESC, OrderID DESC
    LIMIT 1 OFFSET 1
);
```

```
SELECT
    o.OrderID,
    o.OrderDate,
    c.CustomerID,
    CONCAT(c.FName, ' ', c.LName) AS CustomerName,

    o.Payment,
    o.OrderStatus,
    o.FulfillmentType,
    o.ShippingAddress,
    o.DeliveryDate,
    o.PickupDate,
    p.ProductName,
    li.Quantity,
    li.UnitPrice,
    ROUND(li.Quantity * li.UnitPrice, 2) AS LineSubtotal,
    o.AppliedDiscountPercent AS DiscountPercent,
    ROUND(
        li.Quantity * li.UnitPrice
        * (1 - o.AppliedDiscountPercent / 100.0),
        2
    ) AS DiscountedLineTotal,
    ROUND(
        SUM(li.Quantity * li.UnitPrice)
        OVER (PARTITION BY o.OrderID),
        2
    ) AS OrderSubtotal,
    ROUND(
        SUM(
            li.Quantity * li.UnitPrice
            * (1 - o.AppliedDiscountPercent / 100.0)
        ) OVER (PARTITION BY o.OrderID),
        2
    ) AS OrderTotal
FROM orders AS o
JOIN customers AS c
    ON o.CustomerID = c.CustomerID
JOIN employees AS e
    ON o.EmployeeID = e.EmployeeID
JOIN lineitems AS li
    ON o.OrderID = li.OrderID
JOIN products AS p
    ON li.ProductID = p.ProductID
WHERE o.CustomerID = @customer_id
  AND o.OrderID = @order_id
ORDER BY p.ProductID;
```

Customer Invoice

Order Info

- The first invoice shows Anthony Gonzalez's pickup order (Order 15): two Compact Motorized Desks totaling $799.98, reduced to $679.98 after a 15% loyalty discount. The pickup date is recorded, while shipping fields are blank.
- The second invoice shows the same customer's shipped order (Order 35): three different products totaling $12,349.94, reduced to $10,497.45 after the same 15% discount. Shipping and delivery details are recorded, and the order total repeats across the product rows.

Results:

Business Rule Test Cases

Rule	Sample test case	Expected query result
12. Total PTO Check	Employees' sick, vacation, and personal-time balances.	Calculate total PTO and check the 30-day total, 9 sick, 14 vacation, and 7 personal limits. Current balances should pass.
15. Minor Employment Check	Employee 24 is 16 and Full-Time; Employee 25 is 15 and Part-Time.	Calculate ages, flag Employee 24, and mark Employee 25 as compliant.

Calculation

1. Total PTO Check

- This query will calculate each employee's total PTO and check whether their sick, vacation, personal, or combined balances exceed the allowed limits.
- TechNest will use this information to review PTO balances and correct any amounts exceeding Rule 12's limits: 9 sick days, 14 vacation days, 7 personal days, and 30 days overall.

Query:

```
SELECT
    EmployeeID,
    FName AS `First Name`,
    LName AS `Last Name`,
    SickTime,
    VacationTime,
    PersonalTime,
    SickTime + VacationTime + PersonalTime AS TotalPTO,
    CASE
        WHEN SickTime > 9
          OR VacationTime > 14
          OR PersonalTime > 7
          OR SickTime + VacationTime + PersonalTime > 30
            THEN 'Violation'
        ELSE 'Within Limits'
    END AS PTOStatus
FROM employees
ORDER BY TotalPTO DESC, EmployeeID;
```

Result:

EmployeeID	First Name	Last Name	SickTime	VacationTime	PersonalTime	TotalPTO	PTOStatus
20	Erin	Powell	4	14	7	25	Within Limits
3	Brandi	Hernandez	8	12	4	24	Within Limits

Calculation

2. Minor Employment Check

- This query will calculate employees' ages and identify minors whose employment type violates the part-time requirement.
- TechNest will use this information to review employment classifications and ensure employees under 18 work part-time, as required by Rule 15.

Query:

```
SELECT
    EmployeeID,
    FName AS `First Name`,
    LName AS `Last Name`,
    DOB,
    TIMESTAMPDIFF(YEAR, DOB, CURDATE()) AS Age,
    EmploymentType,
    CASE
        WHEN TIMESTAMPDIFF(YEAR, DOB, CURDATE()) < 18
             AND EmploymentType <> 'Part-Time'
            THEN 'Violation'
        ELSE 'Compliant'
    END AS EmploymentStatus
FROM employees
ORDER BY Age, EmployeeID;
```

Result:

Business Rule Test Cases

Rule	Sample test case	Expected query result
No Active Infractions	Fifteen employees have no infractions; Employee 1 has only expired infractions.	Return 16 employees with no active infractions, including Employee 1.
Above-Average Customer Orders	Each customer's order count compared with the average across all 30 customers.	Return customers whose order counts exceed the average.
Products Not Selling	Product 25 was excluded from recent purchases.	Return Product 25 and any others without sales in the last 90 days.
Termination Threshold	Employee 4 has 17 active points; Employee 11 has 9; Employee 1 has expired points.	Return Employee 4 for reaching 15 or more active points. Exclude Employees 11 and 1.
Popular Products	Total quantity sold per product.	Return products with more than 5 units sold, displaying their totals.

Sub Queries

1. No Active Infractions

- This query will show employees with no active infractions, including employees whose previous infractions have expired.
- TechNest will use this information to recognize employees with clear active records under Rules 6 and 8, without counting expired infractions against them.

Query:

```sql
SELECT
    e.EmployeeID,
    e.FName AS `First Name`,
    e.LName AS `Last Name`
FROM employees AS e
WHERE NOT EXISTS (
    SELECT 1
    FROM employeeinfractions AS ei
    WHERE ei.EmployeeID = e.EmployeeID
      AND ei.InfractionDate <= CURDATE()
      AND DATE_ADD(ei.InfractionDate, INTERVAL 1 YEAR) > CURDATE()
)
ORDER BY e.EmployeeID;
```

Result:

EmployeeID	First Name	Last Name
1	Jennifer	Harris
2	Kellie	Walsh
5	Joseph	Cobb
7	Joshua	May
8	Daniel	Hamilton
10	Jennifer	Evans
12	Emma	Dixon
13	Jimmy	Collins
15	Angela	Lowery
17	Joshua	Jones
18	Rick	Daniels
19	Julie	Payne
20	Erin	Powell
23	Riley	Bennett
24	Avery	Collins
25	Morgan	Hayes

Sub Queries

2. Above-Average Customer Orders

- This query will show customers who have placed more orders than the average across all customers, including those with no orders.
- TechNest will use this information to identify frequent customers for personalized service and targeted marketing.

Query:

```
SELECT
    c.CustomerID,
    CONCAT(c.FName, ' ', c.LName) AS CustomerName,
    COUNT(o.OrderID) AS TotalOrders
FROM customers AS c
LEFT JOIN orders AS o
    ON c.CustomerID = o.CustomerID
GROUP BY c.CustomerID, c.FName, c.LName
HAVING COUNT(o.OrderID) > (
    (SELECT COUNT(*) FROM orders)
    /
    (SELECT COUNT(*) FROM customers)
)
ORDER BY TotalOrders DESC, c.CustomerID;
```

Result:

CustomerID	CustomerName	TotalOrders
3	Noah Howard	4
10	Sherri Frazier	4
21	Wendy Peters	4
6	Jessica Martin	3
8	Reginald Robinson	3
15	Samuel Holmes	3
2	Anthony Gonzalez	2
4	Nicole Ward	2
5	Jesse Garcia	2
11	Shawn Mckay	2
19	John Leblanc	2
22	Samantha Schmidt	2
23	Richard David	2
30	Taylor Reed	2

Sub Queries

3. Products Not Selling

- This query will show products with no sales in the last 90 days, including Product 25, which was intentionally excluded from recent orders.
- TechNest will use this information to identify slow-selling products and consider promotions, pricing changes, or reduced future purchases.

Query:

```sql
SELECT
    p.ProductID,
    p.ProductName,
    p.Category,
    p.StockQuantity
FROM products AS p
WHERE NOT EXISTS (
    SELECT 1
    FROM lineitems AS li
    JOIN orders AS o
        ON li.OrderID = o.OrderID
    WHERE li.ProductID = p.ProductID
      AND o.OrderDate >= NOW() - INTERVAL 90 DAY
      AND o.OrderDate <= NOW()
)
ORDER BY p.ProductID;
```

Result:

ProductID	ProductName	Category	StockQuantity
2	Heated Ergonomic Chair	Chairs	3
5	Cooling Mesh Smart Chair	Chairs	57
6	Self-Cleaning Table	Tables	53
7	Holo-Projector Coffee Table	Tables	52
8	Wireless Charging Side Table	Tables	31
16	AI-Powered Bed	Beds	40
23	Smart Charging Nightstand	Storage	42
25	Climate-Controlled Display Cabinet	Storage	30

Sub Queries

4. Termination Threshold

- This query will show employees with 15 or more active infraction points, excluding points that expired one year after their infraction date.
- TechNest will use this information to identify employees who have reached the termination threshold for management review under Rule 8.

Query:

```
SELECT
    e.EmployeeID,
    CONCAT(e.FName, ' ', e.LName) AS EmployeeName,
    active.ActivePoints
FROM employees AS e
JOIN (
    SELECT
        ei.EmployeeID,
        SUM(it.Points) AS ActivePoints
    FROM employeeinfractions AS ei
    JOIN infractiontypes AS it
        ON ei.InfractionTypeID = it.InfractionTypeID
    WHERE ei.InfractionDate <= CURDATE()
      AND DATE_ADD(ei.InfractionDate, INTERVAL 1 YEAR) > CURDATE()
    GROUP BY ei.EmployeeID
    HAVING SUM(it.Points) >= 15
) AS active
    ON e.EmployeeID = active.EmployeeID
ORDER BY active.ActivePoints DESC, e.EmployeeID;
```

Result:

Sub Queries

5. Popular Products

- This query will show products with more than five units sold across all orders, displaying each product's total quantity sold.
- TechNest will use this information to identify popular products, prioritize inventory purchases, and select products to feature in marketing campaigns.

Query:

```
SELECT
    p.ProductID,
    p.ProductName,
    sales.TotalUnitsSold
FROM products AS p
JOIN (
    SELECT
        ProductID,
        SUM(Quantity) AS TotalUnitsSold
    FROM lineitems
    GROUP BY ProductID
    HAVING SUM(Quantity) > 5
) AS sales
    ON p.ProductID = sales.ProductID
ORDER BY sales.TotalUnitsSold DESC, p.ProductID;
```

Result:
